

Lucas de Almeida Lucachak Amorim

Full-Stack Developer · Security-Minded · Python · Java · Spring Boot

lucas.lucachak9@gmail.com | linkedin.com/in/lucachak-dev | github.com/lucachak | portfolio-vercel-inky.vercel.app

São Paulo, SP · Remote-friendly · Hungarian Citizen — No EU Visa Required · Open to Relocation

PROFESSIONAL SUMMARY

Full-stack developer with production systems live and in active use — not just in repositories. I build backend-heavy web applications in Python (Django, FastAPI) and Java (Spring Boot), and approach every system I build with an attacker's mindset: formal ethical hacking coursework, CTF competitions (picoCTF 3000+ pts), custom recon tooling built from scratch, and physical access testing with USB HID devices. Currently studying Computer Science at the University of Debrecen, Hungary, on a merit scholarship. Four languages spoken. Hungarian citizenship — no EU visa required anywhere in Europe.

PROJECTS & SHIPPED WORK

FinGen — AI-Integrated Financial SaaS — 2024 · Live at fingen-app.onrender.com

[Java](#) · [Spring Boot](#) · [Thymeleaf](#) · [HTMX](#) · [Three.js](#) · [OpenRouter AI](#) · [PDF Parsing](#) · [Spring Security](#)

- Built an AI financial advisor that parses real bank statement PDFs and returns concrete recommendations: spending patterns, month-over-month cash flow, and live market-scraped investment suggestions.
- Integrated OpenRouter AI API for conversational financial analysis; Spring Security for authentication and session management.
- Shipped to production with live users — independently maintained and iterated.

CambioMatic — Auto Shop ERP — 2024 · Live at cambiomatic.onrender.com

[Java](#) · [Spring MVC](#) · [PostgreSQL](#) · [Thymeleaf](#)

- Replaced paper-based workflows at real auto repair shops: service orders from open to invoiced, inventory tracking, customer records, and billing — all in one system.
- Designed for non-technical operators; no training or IT support required. Currently in active use.

Arachne — Stealth Job Application Automation Suite — 2025 · github.com/lucachak/Arachne

[Python](#) · [Selenium 4](#) · [Undetected ChromeDriver](#) · [CDP Evasions](#) · [AsyncIO](#)

- Multi-platform automated job application engine for LinkedIn (Easy Apply) and Catho with intelligent form field classification (TEXT_INPUT, SELECT_DROPDOWN, TEXTAREA, RADIO_GROUP, CHECKBOX).
- Gaussian-distributed timing per field type to simulate human cognitive patterns; 3-phase mouse movement with micro-jitter and incremental approach refinement.
- Deep CDP evasions: navigator.webdriver override, mock window.chrome, plugin fingerprint injection, GPU vendor spoofing.

OSINPY — Defensive OSINT & Google Dorking Suite — 2025 · github.com/lucachak/Crawler

[Python](#) · [AsyncIO](#) · [nodriver](#) · [Headless Chromium](#) · [DuckDuckGo](#) · [Yahoo](#)

- 100% async architecture with 4-level engine fallback for resilient, rate-limit-resistant OSINT automation.
- Built for authorized security assessments: identifying exposed assets, open directories, and misconfigured cloud infrastructure (S3, Jenkins, Kubernetes) on owned domains.

Dirb-like — Web Directory Scanner — 2024 · github.com/lucachak/Dirb-like

[Python](#) · [Pure stdlib](#) · [Raw HTTP/HTTPS](#) · [Threading](#)

- Brute-force web directory scanner in pure Python — zero external dependencies. HTTP and HTTPS stacks written by hand against the RFC specification.
- Concurrent scanning with threading, configurable wordlists, and color-coded terminal output.

Django SaaS Boilerplate — 2024 · github.com/lucachak

[Python](#) · [Django](#) · [Stripe](#) · [OAuth2](#) · [PostgreSQL](#) · [Neon DB](#) · [Celery](#) · [HTMX](#) · [Tailwind CSS](#)

- Production-ready SaaS foundation: Stripe subscription billing with webhooks, Google + GitHub OAuth2, Celery async task queue, and serverless Postgres on Neon.

EDUCATION

Bachelor's in Computer Science — 2022 — Present

[University of Debrecen](#) — [Debrecen, Hungary](#)

- Merit Scholarship — Diaspora Holder Program (Hungarian citizenship). Fully English-taught curriculum.
- Coursework includes: Ethical Hacking, Algorithms & Data Structures, Object-Oriented Development, Operating Systems.
- 3+ years of international academic experience in Central Europe.

SECURITY & TECHNICAL DEPTH

- **Ethical Hacking (coursework):** Formal university coursework covering network attack analysis, vulnerability assessment, and social engineering methodology.
- **CTF Competitions:** picoCTF 3000+ points; active participation across web, binary, and cryptography categories.
- **USB HID / Physical Access:** Converted a Raspberry Pi Pico into a BadUSB device (Rubber Ducky-style keystroke injection) for physical access lab scenarios.
- **Android Security Research:** APK structure analysis, static analysis, and payload behavior study in sandboxed VM environments.
- **Network Analysis:** Hands-on study of DoS/DDoS traffic patterns at the protocol level in isolated lab environments.
- **Low-level systems:** Raw socket programming, VM sandboxing, Linux internals; wrote full HTTP/HTTPS stack from scratch following RFC spec.

TECHNICAL SKILLS

Languages: Python (advanced) · Java · C# · C · SQL

Backend: Django · FastAPI · Spring Boot · Spring MVC · Spring Security · REST APIs · Celery

Frontend: Thymeleaf · HTMX · Tailwind CSS · Three.js

Databases: PostgreSQL · Neon DB (serverless) · SQL

DevOps: Docker · Git · Linux · Nginx

Security: Selenium stealth · CDP evasions · OSINT tooling · USB HID · CTF · Ethical Hacking

Integrations: Stripe API · OAuth2 · OpenRouter AI · PDF parsing · Django Allauth

Data: Pandas · Streamlit · Power BI

LANGUAGES

Portuguese (Native) · **English** (Fluent) · **Hungarian** (Conversational) · **Spanish** (Intermediate)
